Lascaux Cave, discovered 1940

Pont D'Arc,
Ardèche River,
France

Chauvet Cave, discovered 1994

Visit Lascaux and Chauvet

- Neanderthal Lunch
 - Baked Salmon
 - Salmon abounded in French rivers
- Hunter-gatherers worked 3 hours/day to provide for their families

Concerning Technology

- New technology will bring the downfall of the educational system
- Tremendous controversy about the use of written records in teaching (5th century B.C.)
- Use of writing “will create forgetfulness in the learners’ souls, because they will not use their memories....”

Socrates, in *Phaedrus*

Clark Kerr

More PRAXIS is needed

Benjamin Franklin, 1780

“The rapid progress true science now makes occasions my regretting sometimes that I was born so soon. It is impossible to imagine the height to which may be carried, in a thousand years, the power of man over matter.

O that moral science were in a fair way of improvement, that men would cease to be wolves to one another, and that human beings would at length learn what they now improperly call humanity.”

Lewis Thomas, “Making Science Work”

“The social scientists have a long way to go to catch up, but they may be up to the most important scientific business of all, if and when they finally get to the right questions.

Our behavior toward each other is the strangest, most unpredictable, and almost entirely unaccountable of all the phenomena with which we are obliged to live. In all of nature there is nothing so threatening to humanity as humanity itself.”

David Deutsch on Creativity

“Of all the countless biological adaptations that have evolved on our planet, creativity is the only one that can produce scientific or mathematical knowledge, art or philosophy. Through the resulting technology and institutions, it has had spectacular physical effects - most noticeably near human habitations, but also further afield: a substantial portion of the Earth’s land area is now used for human purposes. Human choice - itself a product of creativity - determines which other species to exclude and which to tolerate or cultivate, which rivers to divert, which hills to level, and which wildernesses to preserve. In the night sky, a bright, fast-moving spot may well be a space station carrying humans higher and faster than any biological adaptation can carry anything. Or it may be a satellite through which humans communicate across distances that biological communications has never spanned, using phenomena such as radio waves and nuclear reactions, which biology has never harnessed. The unique effects of creativity dominate our experience of the world.” (p. 398)

David Deutsch, *The Beginning of Infinity: Explanations that Transform the World*, 2011

SIOP and Organizational Science

Our Applied Organizational Science: Strong and Growing
SIOP Has Never Been Stronger
Unwavering Focus on Praxis
Relentless Emphasis on Evidence

SIOP Membership: Around 10,000 (62% Pay Full Dues)
SIOP is now more “outward facing” than ever before

Let's Create a Society for Organizational Science

**What would you
do if you had
\$100,000 to
shape the future
world of work?**

Introducing the Visionary Circle, a venture to build a renewable and continuing source of funding for I-O research and development.

High Level Overview – How We Will Do It:

- Collect venture philanthropic capital by recruiting Visionary Donors
- Call for Visionary Grant proposals
- Visionary Donors Select Visionary Grant Awardee(s)
- Implement findings
- Repeat Every Year

Rapid advancement in I-O psychology and the organizational sciences now is surely needed. The mania about artificial intelligence systems and big data is at flood tide, with no shortage of need for critical and creative thinking about creating smarter workplaces. We face great challenges in the workplace from the changing nature of work to sexual harassment in the workplace to a multi-generational workforce. These issues stretch beyond companies and cultures and demand the best thinking, collaboration, and collective attention.

Horizon Forum

- What's on your horizon? What do you see coming that keeps you awake at night?
- Interviews with CHROs about trends affecting one's industry and desired projects to yield better practice.
- Accenture, AmEx, ADM, Corning, HP, Ingersoll-Rand, IBM, Marriott, Medtronics, Target
- Research Agenda was formulated at a small group meeting in Charlotte, Feb. 27, 2019

Horizon Forum Agenda

- Leadership - Development and Selection of Future Leaders (including workforce engagement, responsible leadership and creating an environment of continuous learning)
- Diversity and Inclusion (including changing demographics, multigenerational and global workforces)
- New Ways of Working (including the impact of technology on work and the workforce as seen in AI, robotics, telework, and global connectivity, etc.)
- OVERARCHING NEED: Bridging the Science/Practice Gap
How do we take a research question and shorten the cycle time between gathering knowledge/evidence and implementing actionable results (i.e., rapid prototyping, agile inventions, action incubators)?

On Meta-Analysis

“While meta-analysis may be a step toward an ‘objective’ summarization of the state of the art in a given scientific area, I get the impression that at least some folks think the method somehow will facilitate arriving at scientific ‘truth.’

At its very best, meta-analysis cannot determine what is *true*, it only can attempt to measure what *is*.

If we constantly keep in mind that, had meta-analysis been around at the time, it would have confirmed that planet Earth was flat and the center of the universe, we’ll be all right.”

Bernard J. Fine, *Science*, 1990, 250, 494.

David Deutsch on Theory

“I have often thought that the nature of science would be better understood if we called theories ‘misconceptions’ from the outset, instead of only after we have discovered their successors. Thus we could say that Einstein’s Misconception of Gravity was an improvement on Newton’s Misconception, which was an improvement on Kepler’s. The neo-Darwinian Misconception of Evolution is an improvement on Darwin’s Misconception, and his on Lamarck’s. If people thought of it like that, perhaps no one would need to be reminded that science claims neither infallibility nor finality. “ (p. 446)

David Deutsch, *The Beginning of Infinity: Explanations that Transform the World*, 2011

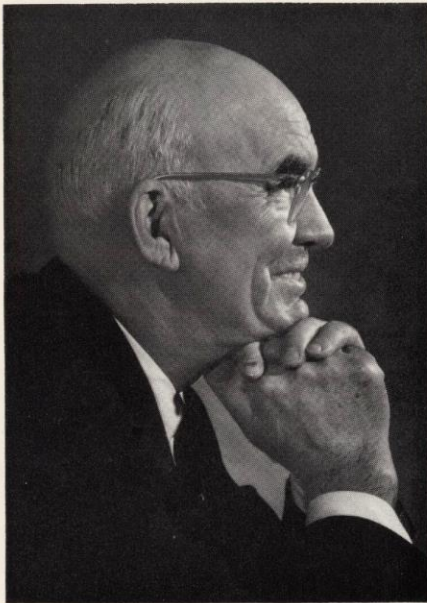

All evils are caused by insufficient knowledge

David Deutsch presents this statement as the principle of optimism, writing:

“Optimism is, in the first instance, a way of explaining failure, not prophesying success. It says that there is no fundamental barrier, no law of nature or supernatural decree, preventing progress. Whenever we try to improve things and fail, it is not because the spiteful (or unfathomably benevolent) gods are thwarting us or punishing us for trying, or because we have reached a limit on the capacity of reason to make improvements, or because it is best that we fail, but always because we did not know enough, in time.” (p. 212)

David Deutsch, *The Beginning of Infinity: Explanations that Transform the World*, 2011

[Tae-Hyun Oh](#)^{*†} [Tali Dekel](#)^{*} [Changil Kim](#)^{*†} [Inbar Mosseri](#) [William T. Freeman](#)[†] [Michael Rubinstein](#) [Wojciech Matusik](#)[†]

We consider the task of reconstructing an image of a person's face from a short input audio segment of speech. We show several results of our method on VoxCeleb dataset. **Our model takes only an audio waveform as input** (the true faces are shown just for reference). Note that our goal is not to reconstruct an accurate image of the person, but rather to recover characteristic physical features that are correlated with the input speech.

The Politics Industry

Recent Trouble

2008 Democratic Convention

<https://www.hbs.edu/competitiveness/Documents/why-competition-in-the-politics-industry-is-failing-america.pdf>

SEPTEMBER 2017

WHY COMPETITION IN THE POLITICS INDUSTRY IS FAILING AMERICA

A strategy for reinvigorating our democracy

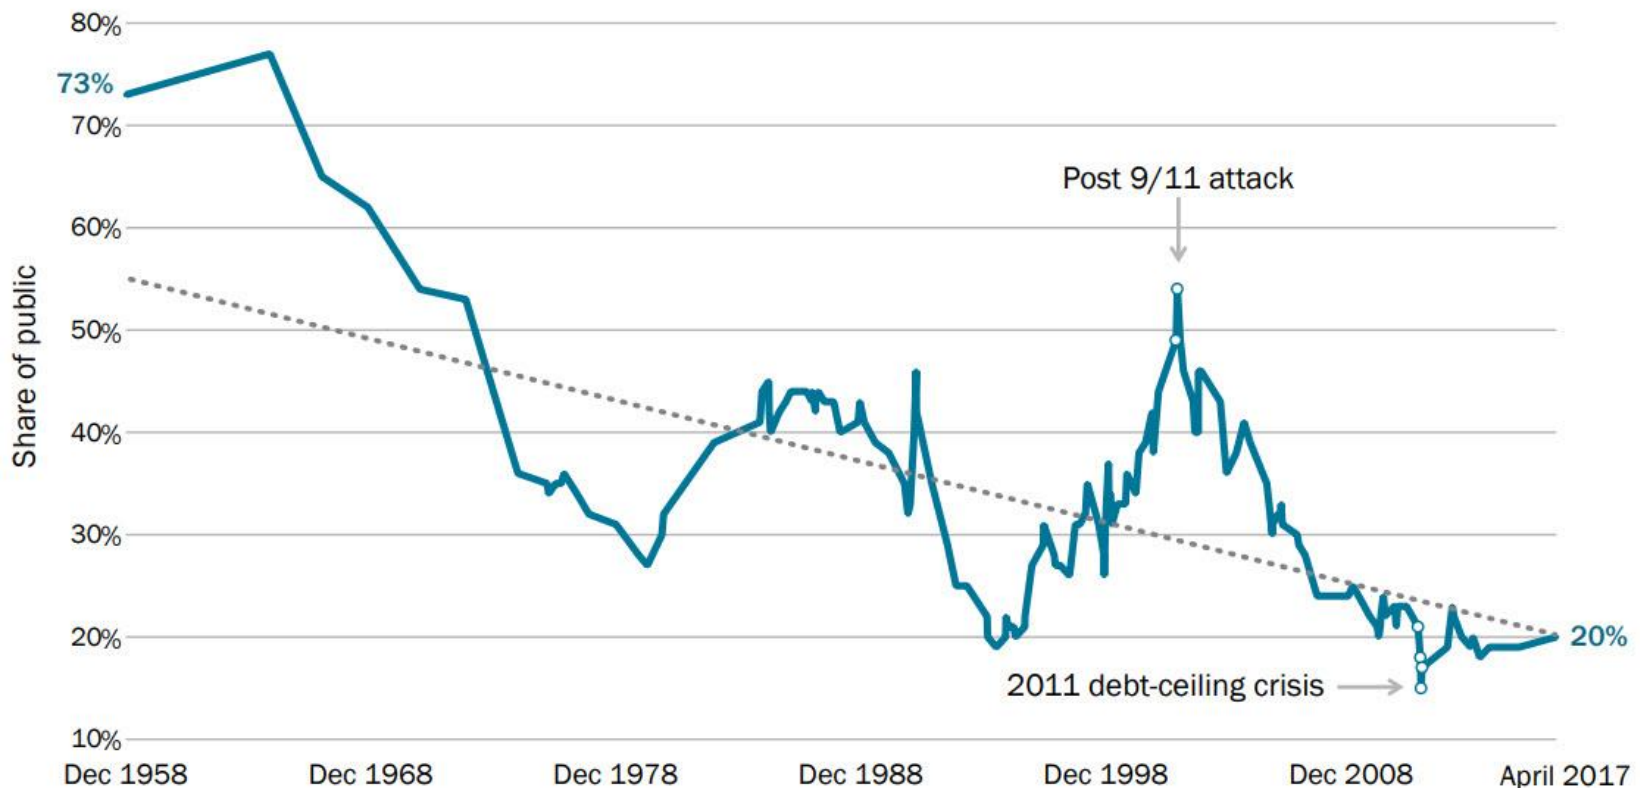

Katherine M. Gehl and Michael E. Porter

“I’m from Govt, Here to Help You”

FIGURE 1: DECLINING PUBLIC TRUST IN THE FEDERAL GOVERNMENT

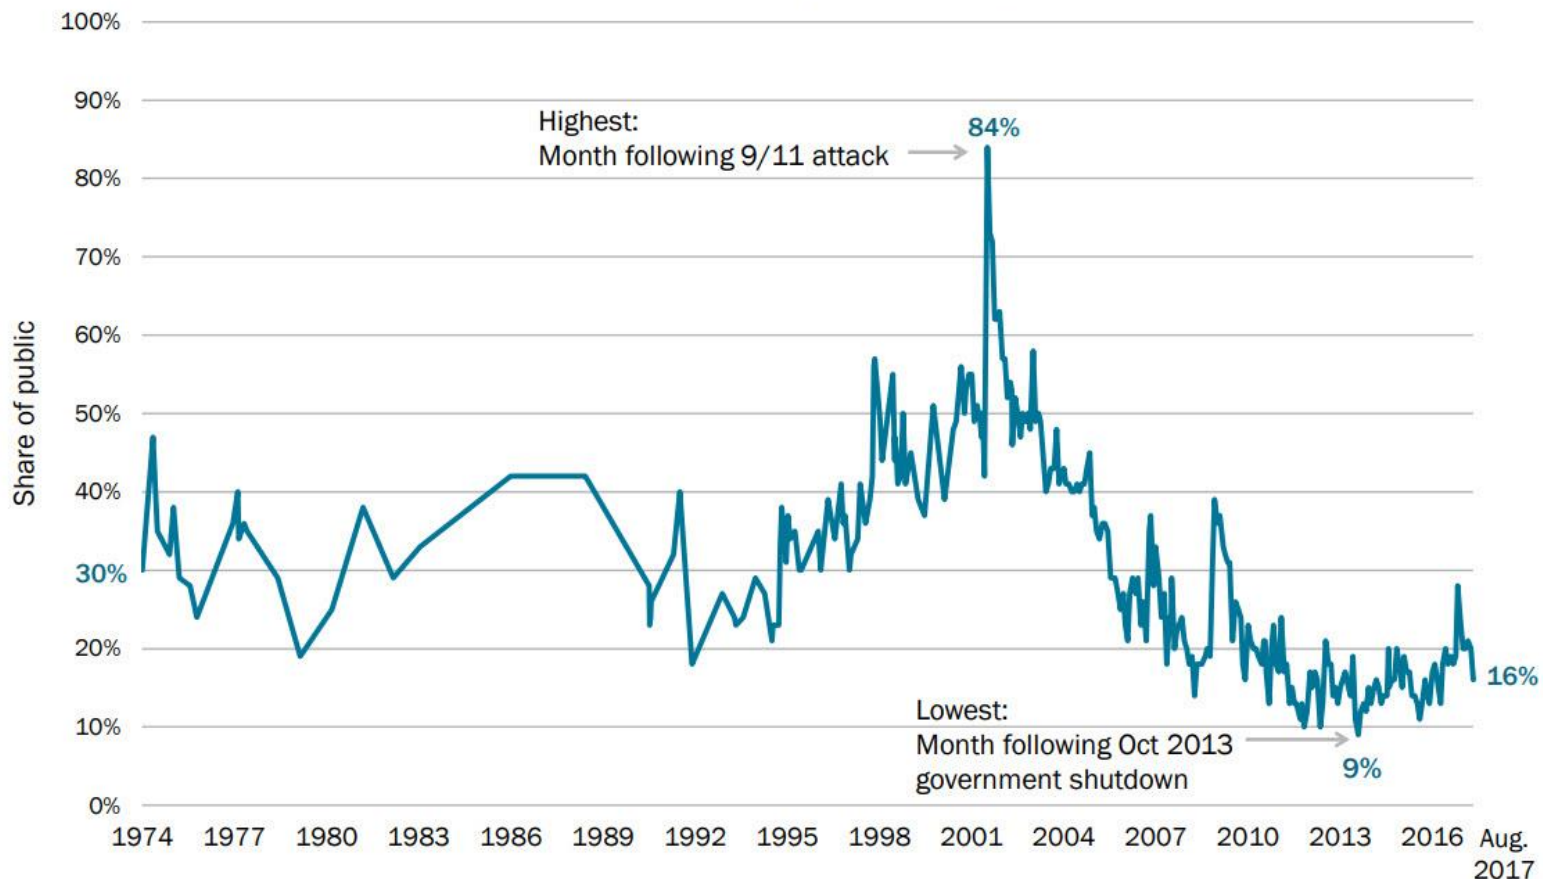

As of April 2017, about one in five Americans trust the federal government always or most of the time

“I’m Mad as Hell, and I’m Not....

FIGURE 2: LOW CONGRESSIONAL JOB APPROVAL RATINGS IN PAST DECADE

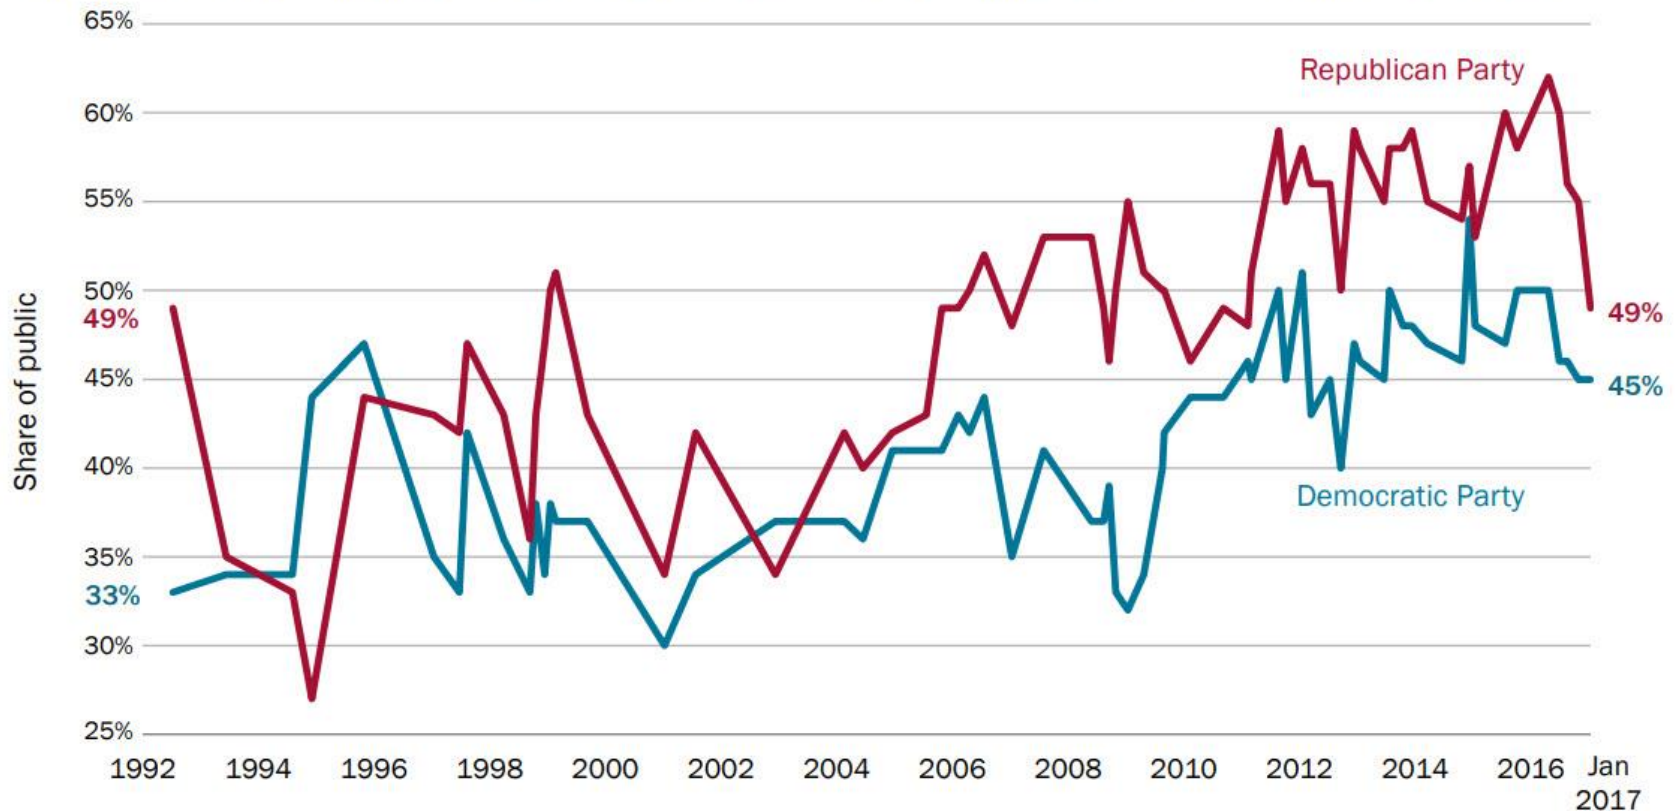

As of August 2017, 16% of Americans approve of the way Congress is handling its job

“Base” is a 4-letter Word

FIGURE 3: INCREASING UNFAVORABLE OPINION OF THE MAJOR PARTIES

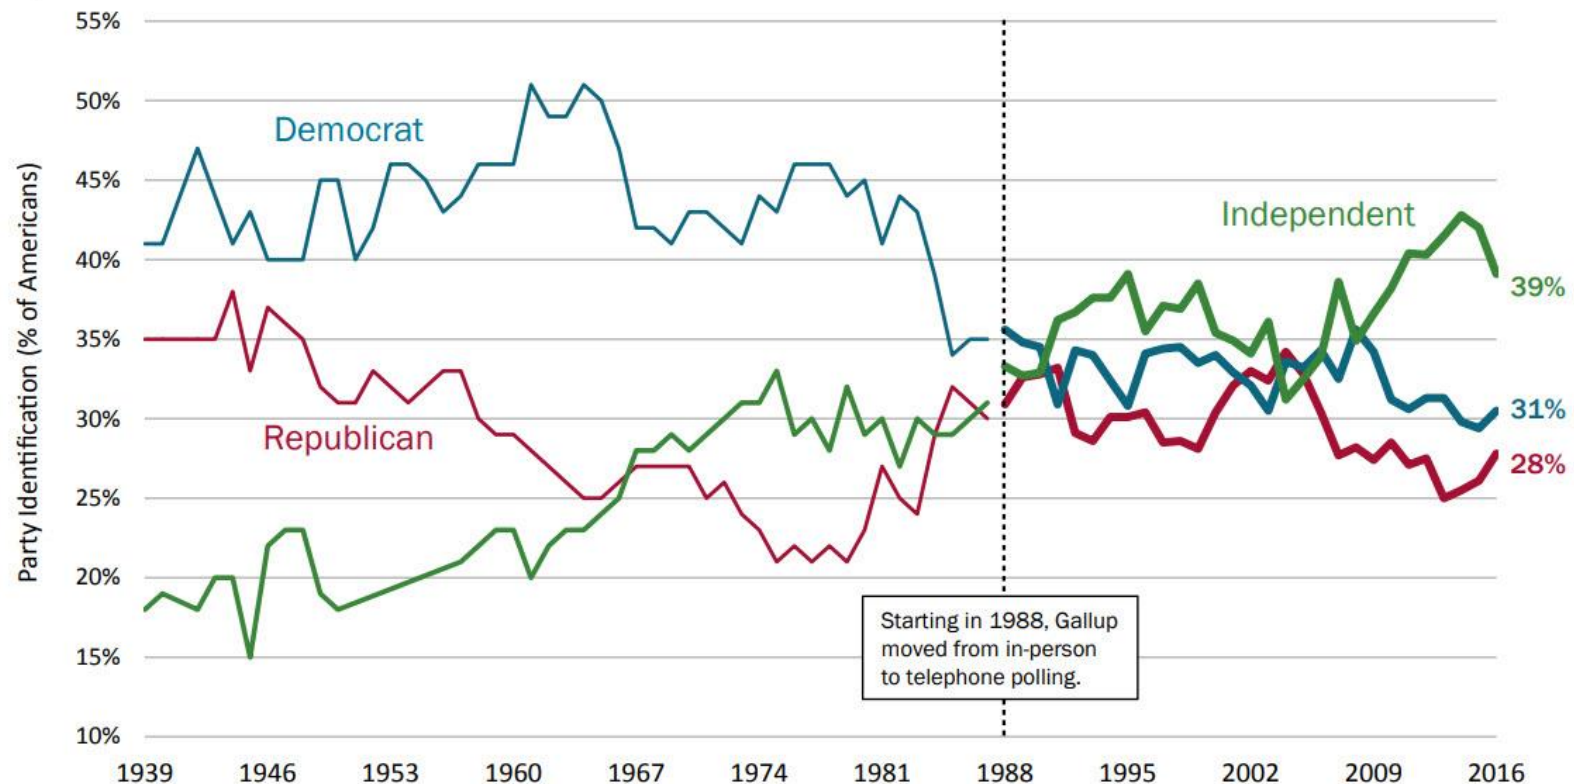

As of January 2017, nearly half of the public holds an unfavorable opinion of the Democratic and Republican parties

The Rise of the Independents

FIGURE 4: RISING PROPORTION OF AMERICANS IDENTIFYING THEMSELVES AS INDEPENDENTS

As of 2016, nearly 4 in 10 Americans identify as Independent, relative to roughly 3 in 10 for both Democrats and Republicans.

Reforming the Politics Industry

- Adopt Nonpartisan Top-Four Primary Elections
 - California and Washington now have Top-Two primaries
- Institute Ranked-Choice Instant Runoff Balloting
 - Maine
 - APA and SIOP
- Institute Nonpartisan Redistricting
- Reform Money in Politics - 100% Spending Transparency
- Open Up Competition Without Waiting for Structural Reforms - “Senate Fulcrum Strategy”

<https://www.hbs.edu/competitiveness/Documents/why-competition-in-the-politics-industry-is-failing-america.pdf>

Deutsch on Postmodernism

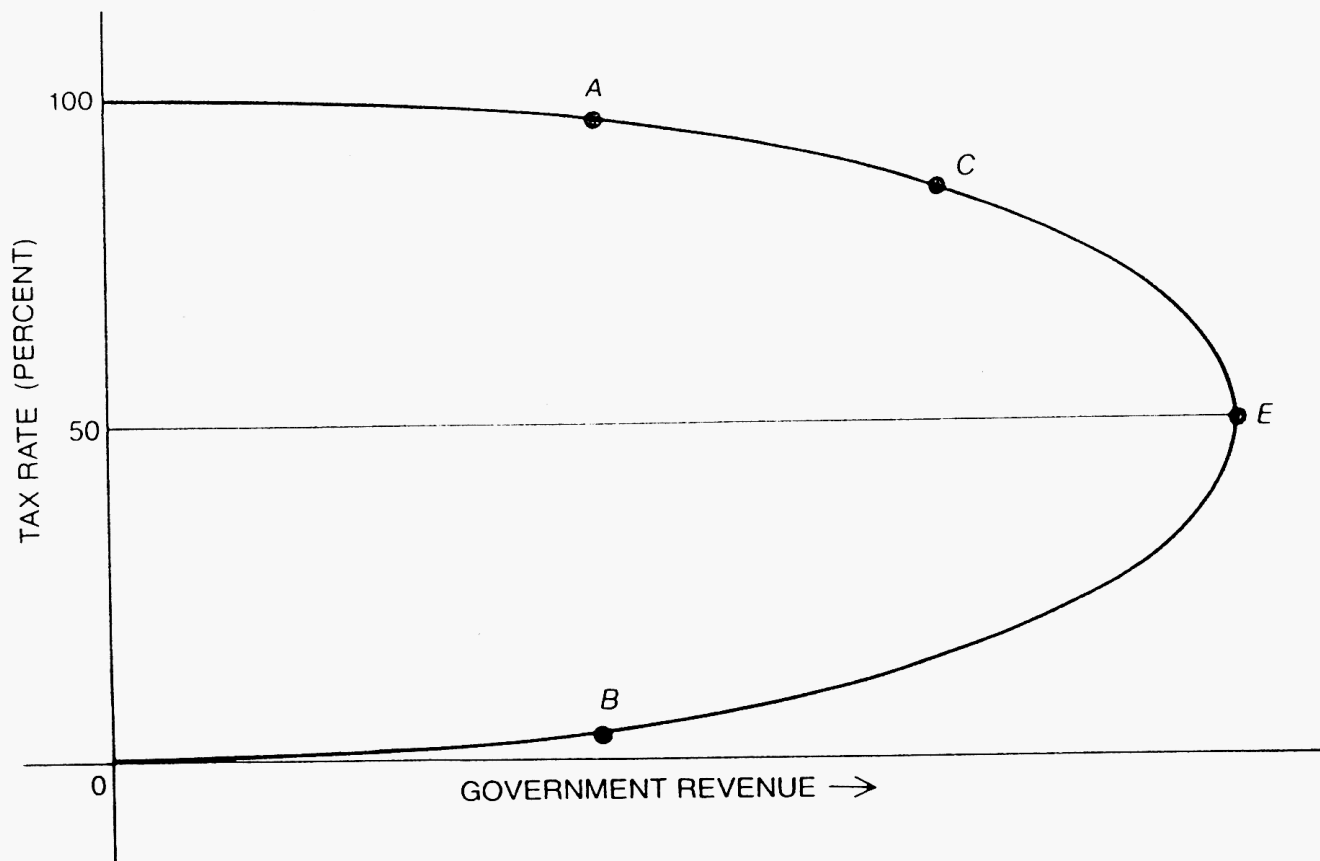

“One currently influential philosophical movement goes under various names such as postmodernism, deconstructionism, and structuralism, depending on historical details that are unimportant here. It claims that because all ideas, including scientific theories, are conjectural and impossible to justify, they are essentially arbitrary: they are no more than stories, known in this context as ‘narratives. Mixing extreme cultural relativism with other forms of anti-realism, it regards objective truth and falsity, as well as reality and knowledge of reality, as mere conventional forms of words that stand for an idea’s being endorsed by a designated group of people such as an elite or consensus, or by a fashion or other arbitrary authority. And it regards science and the Enlightenment as no more than one such fashion, and the objective knowledge claimed by science as an arrogant cultural conceit.

Deutsch on Postmodernism (cont.)

“Perhaps inevitably, these charges are true of postmodernism itself: it is a narrative that resists rational criticism or improvement, precisely because it rejects all criticism as mere narrative. Creating a successful postmodernist theory is indeed purely a matter of meeting the criteria of the postmodernist community - which have evolved to be complex, exclusive and authority-based. Nothing like that is true of rational ways of thinking: creating a good explanation is hard not because of what anyone has decided, but because there is an objective reality that does not meet *anyone's* prior expectations, including those of authorities. The creators of bad explanations such as myths are indeed just making things up. But the method of seeking good explanations creates an engagement with reality, not only in science, but in good philosophy too - which is why it works, and why it is the antithesis of concocting stories to meet made-up criteria.” (p. 314)

The Laffer curve

Keep Your Sense of Humor

The neo-Laffer (NL) curve

Hiawatha Designs an Experiment

Hiawatha, mighty hunter,
He could shoot ten arrows upward,
Shoot them with such strength and swiftness
That the last had left the bow-string
Ere the first to earth descended.

Maurice G. Kendall, 1959, *The American Statistician* 13: 23-24.

Keep Your Sense of Humor

The Song of a Consultant

From the towers made of ivory
to the land of troubled business
came the well-equipped consultant
with a multitude of methods
based on elegant statistics
(to the laymen all-confusing)
to explore the workers' problems
and the cause of low production.

Steven E. Mayer and Dale O. Jorgenson, *Personnel Psychology*,
1975, pp. 389-392.
